Call Flow

HONEY BEE
ALLIES

By reviewing feedback from reporters and monitoring speed and frequency of beekeeper responses to swarm calls, we maintain an up-to-date and dependable list of active beekeepers that we feel confident recommending to the general public.

When we receive a swarm call, registered beekeepers are contacted using a merit-based prioritization system. This weighted system encourages our registered beekeepers to develop a reputation of consistency & competency that will serve them each time they use our services.

Not honey bees?

Has the hive already been established? Not a problem! In these cases, the reporter would be referred to other professionals for further assistance.

When a beekeeper commits to a swarm retrieval, the reporter is automatically dialed and connected to the beekeeper.

After communicating with the reporter, the beekeeper proceeds to the swarm's location.

If the beekeeper has agreed to be a mentor, they may also attempt to contact any novice beekeepers in the area to witness/participate in the swarm retrieval.
